PhoneTell

Rank: #213

PhoneTell

Price: Free

Rating: 2.83/5 (6 votes)

Description

PhoneTell is a productivity-enhancing application that helps the User better find and manages the mobile connections most important to them. Key product features include:

1. Inbound Call Assistant

PhoneTell shows you exactly who is calling.

If the caller is in your contacts, you'll see their photo/name/number and personal data. If it's your doctor or pharmacy reminding you of a pick up, you can see that as well. PhoneTell even shows you if it's a telemarketer. Before PhoneTell, this was not possible. This one simple feature solves the problem of knowing anyone who's calling via instant reverse lookup.

No more unanswered calls.

When your mobile phone rings, whether the caller is in your address book or not, you can choose to respond with a pre-set SMS message letting the caller know you are busy and will call them back.

2. Enhanced Directory Search

PhoneTell is a complete re-think of how a mobile phone's dialer should work. Instead of just a set of dumb buttons, PhoneTell has created a "smart dialer" that can find any phone number you're looking for; whether or not it's in your contacts or not.

PhoneTell finds any phone number faster and more accurately than anything out there. Get any number for a friend, colleague or business right from your dialer.. No more scanning needless information, no more need to remember "which app for that." Just type or speak the name you need, and let PhoneTell do the searching for you and present rank-ordered choices most closely matching your search with one click to call.

PhoneTell pings the world's largest/most recent sources of phone-related information, simultaneously connecting your local and social contacts with patent-pending algorithms to give you precisely the right data you need based on your own calling...
